Heath Construction was the Construction Manager/General Contractor for this \$530,000 facility renovation and gymnasium/multi-purpose room addition. The old gym had collapsed during a heavy snowstorm and the new building was an upgraded facility erected on the same downtown site. Work included new locker rooms, storage, full audio visual equipment, stage lighting, and an elevator.

“Throughout the entire process, from ideas and concepts to completion, we found their staff highly cooperative, flexible, competent, offering new ideas for our committee’s consideration, cost oriented, responsive and professional in every way. We felt truly blessed to have the opportunity to work with Mr. Randy DeMario and his group of skilled and gifted individuals.”
